EVS / NVS
Service
Interface

Purpose of EVS / NVS Service Interface

- ▶ The EVS / NVS Service Interface provides a system-to-system interface to the core mapping data base of the EVS (European VCD System)
- ▶ Accessed by NVS components (National VCD System, e.g. the VCD Designer)
- ▶ The core mapping data base contains
 - ▶ information about national legal procurement rules (e.g. criteria and evidences defined in national procurement laws)
 - ▶ information about European legal procurement rules (e.g. criteria as defined in Directive 2004/18/EC)
 - ▶ connections between criteria and evidence information
 - ▶ connections between EU rules and national rules
- ▶ It allows to identify criteria and evidences in one member state and map them to criteria and evidences in another member state
- ▶ This functionality is hidden to the user. The VCD Designer performs all relevant actions and presents information to the user

Purpose of VCD Designer

Economic operators can ...

- ▶ ... create VCD Package Skeletons (provides basic skeleton data structure for the final VCD Package)
- ▶ ... provide information about tenderer (consortium members and sub-contractors)
- ▶ ... select list of criteria that have to be proven
 - ▶ based on automatic criteria suggestions provided by the VCD Designer
 - ▶ taking legal rules of the tenderer into account
 - ▶ final selection of criteria is made manually with respect to the criteria definition in the call for tender
- ▶ ... retrieve list of evidence documents that are suitable to prove compliance to the criteria
 - ▶ automatic suggestions are provided by the VCD Designer
