ICT Implementations_Ontology Management System 100.txt

The Ontology Management System (OMS) is a proprietary background system of the European VCD System with restricted access to PEPPOL WP2 beneficaries. The European VCD system (EVS) is maintained via the Ontology Management System (OMS). The OMS provides the editing and management functionality for the different ontologies. Every PEPPOL WP2 beneficary that has implemented a national legal qualification domain as ontology receives access to this system till the end of the Peppol project in order to further maintain and update his ontology.
